

Up to eight 6000 Series control systems can be connected with an IBM compatible "PC" computer. The software supplied creates virtual front panels on the PC screen for each of the generating sets. All the information available on the generating set mounted 6000 Series panel is made available on the computer screen. This includes displays of performance parameters and shutdown and alarm warning messages.

There are two versions of the 6000PC software:

▶ **6000PC1**

Provides remote monitoring of all system parameters.

▶ **6000PC2**

Provides remote monitoring of all system parameters and allows the operator to remotely control the generating set as if standing at the local 6000 Series panel.

Both versions provide the software package and a desktop interface box.

System requirements:

A personal computer (PC), either laptop or desktop, with the Microsoft Windows 95/98 operating system.

Minimum-specification:

486 DX4 Processor

12 MB RAM

2 MB hard disk space

Recommended specification:

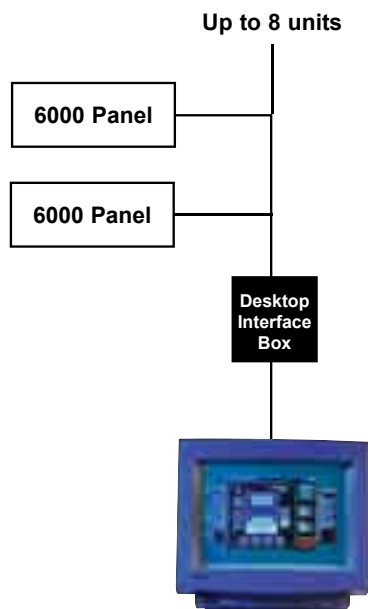

Pentium P100 Processor

16 MB RAM

2 MB hard disk space

6000PC Software system

Control panel
